NADEEN HANY MOHAMMED AHMED

Computer Engineering Student — AI Engineer

Alexandria, Egypt — +20 1017149170

nadeenhany99@gmail.com — linkedin.com/in/nadeen-hany-71a77221b — github.com/Nadeeen232 — nadeenportfolio.vercel.app

OBJECTIVE

Computer Engineering student at E-JUST focused on AI engineering, with hands-on work in deep learning for medical imaging, classical machine learning, and data analysis. Comfortable taking a model from raw data through training and evaluation, and building the web front end that puts it in front of users. Looking for an AI/ML internship or junior role on a team that ships real models.

EDUCATION

Egypt-Japan University of Science and Technology (E-JUST) *Expected 2028*

Bachelor of Science in Computer Engineering — CGPA: 3.6/4.0

Relevant Coursework: Machine Learning, Deep Learning, Computer Vision, NLP, LLMs, Data Structures & Algorithms

WORK EXPERIENCE / INTERNSHIPS

AI Trainee — Samsung Innovation Campus *2026*

- Completed Samsung's AI track covering Python, statistics, machine learning, and deep learning.
- Delivered a capstone project predicting at-risk students on a 100K-record dataset, reaching 0.89 ROC-AUC.

Data Science Trainee — Orange Digital Center (D-Hub) *2026*

- Cleaned, explored, and visualized datasets with Python, Pandas, NumPy, and Matplotlib.
- Trained classification and prediction models with Scikit-learn and reported results through dashboards.

Front-End Developer Trainee (React) — DEPI (Digital Egypt Pioneers Initiative) *2025*

- Built responsive single-page applications with React, JavaScript, and Vite using reusable components and hooks.
- Connected front ends to REST APIs and managed client-side state and routing.

MEAN Stack Developer Trainee — National Telecommunication Institute (NTI) *2025*

- Built full-stack apps with MongoDB, Express.js, Angular, and Node.js, including JWT authentication and RESTful APIs.
- Worked in Git-based team workflows with a component-based architecture.

PROJECTS

Chest X-Ray Pneumonia Detection *(TensorFlow/Keras, Transfer Learning, U-Net)* — github.com/Nadeeen232/Chest-XRay-ML-Project

- Built a binary classifier (Normal vs. Pneumonia) on chest X-rays, comparing DenseNet121, EfficientNetB0, and a Swin Transformer model.
- Added a U-Net segmentation stage that extracts the lung region so classifiers can train on lung-only images.
- Handled a very small validation set by carving a validation split out of the training data, and used augmentation to limit overfitting.
- Exported per-model probability predictions on a held-out test set to prepare for an ensemble stage.

Student At-Risk Prediction *(Python, Scikit-learn, XGBoost)* — github.com/Nadeeen232/student-at-risk-prediction

- Built a pass/fail classifier on 100,000 student records (62 features after encoding) to flag at-risk students before exams.
- Compared Logistic Regression, Decision Tree, Random Forest, Gradient Boosting, and an RF + XGBoost soft-voting ensemble.
- Chose tuned Logistic Regression for its **82% fail recall** and **0.89 ROC-AUC**, catching 3,715 of 4,522 failing students.

- Removed leakage columns, used a stratified 80/20 split with median/mode imputation, and identified prior GPA and study habits as top predictors.

Student Stress Level Analysis *(Python, Pandas, Seaborn, Power BI — team project)* — github.com/Nadeeen232/Student-Stress-Level-Data-Analysis

- Cleaned and analyzed physiological data (heart rate, body temperature) against self-reported stress levels.
- Ran group comparisons and correlation analysis, and built an interactive Power BI dashboard of the results.

AI Learning Platform *(JavaScript, Node.js — team project)* — github.com/Nadeeen232/ai-learning-platform

- Contributed to an educational platform that teaches algorithms through animations, interactive simulations, and live performance comparisons.

NovaCart — Full-Stack E-Commerce *(Angular, Node.js, Express, MongoDB)* — github.com/Nadeeen232/NovaCart_EcommerceApplication

- Built a storefront and admin panel with JWT auth, bcrypt password hashing, and email confirmation through Nodemailer.

Library Management System *(Python, OOP, Tkinter)* — github.com/Nadeeen232/Library-Management-System

- Wrote a Python app with role-based access, borrowing with automatic late fines, search, usage reports, and JSON persistence, with both CLI and GUI.

SKILLS

Technical Skills:

- **Languages:** Python, SQL, JavaScript, TypeScript, HTML5, CSS3
- **Deep Learning & CV:** TensorFlow, Keras, PyTorch, CNNs, Transfer Learning, Vision Transformers, U-Net Segmentation, Data Augmentation
- **Machine Learning:** Scikit-learn, XGBoost, Ensemble Methods, Feature Engineering, Hyperparameter Tuning, Cross-Validation, Classification & Regression
- **Data:** Pandas, NumPy, Matplotlib, Seaborn, Power BI, EDA, Data Cleaning, MongoDB
- **Web:** React, Angular, Node.js, Express.js, RESTful APIs, JWT Auth
- **Tools:** Git, GitHub, Jupyter, Google Colab, Postman, OOP

Soft Skills:

- Problem Solving, Analytical & Critical Thinking, Team Collaboration, Communication, Adaptability, Time Management

Languages:

- **Arabic:** Native
- **English:** Fluent
